Professional Summary

Mobile Engineer with 3+ years of professional experience building and maintaining Flutter, Android, and iOS applications across fintech, agriculture, edutech, and enterprise products. Experienced in mobile architecture, payment integrations, application security, automated testing, and CI/CD, with hands-on experience delivering production features used by 30K+ users.

Work Experience

Mobile Engineer | Fortress Digital Services (Full Time) | January 2024 – Present

• Delivered end-to-end financial features (BI-Fast, Virtual Accounts, e-Wallets) across Flutter, Android Native (Kotlin), and iOS Native (Swift) codebases, applied Clean Architecture with BLoC in Flutter and MVVM patterns in native Android/iOS applications consistency for 30k+ users.

• Integrated third-party payment gateways (GoPay, DANA, OVO, QRIS) and implemented client-side security measures including biometric authentication, SSL pinning, and root/jailbreak detection.

• Elevated app reliability by enforcing 90% unit test coverage and improved code quality through SonarQube Quality Gate enforcement and remediation of critical findings.

• Performed SAST vulnerability remediation using MobSF, identifying and fixing security flaws prior to store deployment.

• Automated build and release workflows via Gitlab CI/CD pipelines, resolving complex shared dependency conflicts across multi-package Flutter repositories.

Flutter Developer | Yayasan HSI AbdullahRoy (Freelance) | July 2025 – April 2026

• Refactored core modules of a Flutter-based Islamic education app (Quran reader, event management, donations), resolving memory leaks and optimizing UI rendering performance across low-end devices.

• Engineered donation engine integrated with third-party payment gateways (Midtrans and Xendit), handling secure transaction flows, real-time webhook status updates, and campaign progress tracking.

• Collaborated with backend and product teams to define RESTful API contracts and UI design systems, actively leading peer code reviews to enforce Clean Architecture and maintain high codebase scalability.

Mobile Developer | Agree - Telkom Indonesia (Internship) | January 2023 – December 2023

• Architected and deployed multi-role Agritech mobile applications (Agree Field & Agree Merchant) using React Native and Android Native, tailoring distinct workflows for field operators and B2B merchants.

• Integrated IoT telemetry and real-time sensor monitoring via MQTT and REST API, enabling farmers to track soil metrics, weather data, and automated farming activities live.

• Implemented offline-first data synchronization using local database storage, allowing field workers to record daily operations in remote areas with unstable network connectivity.

• Streamlined supply chain management features, including order tracking, inventory management, and digital invoicing, driving digital adoption across Telkom's agricultural ecosystem.

WordPress Developer | PT. Global Mapping Studio Indonesia (Freelance) | June 2022 – March 2023

• Developed custom WordPress themes and plugins using PHP, JavaScript, and MySQL, tailoring responsive web interfaces and dynamic business logic for corporate clients.

• Optimized site performance and security by implementing caching strategies, database query tuning, and routine vulnerability patching to maintain maximum uptime.

Teaching Assistant – Data Structures & Algorithms (Part-Time) | Universitas Pendidikan Indonesia kampus Cibiru | February 2022 – May 2022

• Facilitated DSA practicum sessions for 60+ students, teaching core concepts including Linked Lists, Trees, Graphs, Sorting algorithms, and Big-O time complexity analysis using C++ and Java.

• Mentored students in code debugging and logic optimization, designing 20+ algorithmic problem sets to build strong computer science fundamentals and memory management awareness.

Education

Bachelor of Software Engineering | Universitas Pendidikan Indonesia | 2020-2024
GPA: 3.93/4.00 (Cum Laude)

Key Skills

• Programming Languages : Dart, Kotlin, Swift, PHP, JavaScript
• Mobile Frameworks : Flutter, Android Native (Jetpack Compose), iOS Native (SwiftUI), React Native
• Architecture & State : Clean Architecture, MVVM, BLoC, Riverpod, Provider
• Security & Quality : SSL Pinning, Biometric Auth, ProGuard/R8, Guardsquare, SAST (SonarQube, MobSF), Unit & Widget Testing
• CI/CD & DevOps : Gitlab, Fastlane, Google Play Console, App Store Connect, Firebase Distribution
• Storage & Networking : REST API (Dio/Retrofit), WebSockets, SQLite, Room, Hive, Firebase Suite
