Professional Summary

Mobile engineer with 3+ years of experience building and maintaining apps across Flutter, Android, iOS, and React Native. I've worked across multiple projects and domains, focusing on writing clean code, keeping apps stable, and shipping features that actually work in production.

Work Experience

Mobile Engineer | PT. Sarana Pactindo (Full Time) | Bandung | 01/2024 – Present

- Built and maintained core financial features across multiple mobile banking apps including top-up, bill payments, BI-Fast transfers, Virtual Account, time deposits, and online onboarding serving customers with different banking behaviors and demographics.
- Integrated payment like GoPay, Dana, OVO, and QRIS end-to-end, from UI to API, alongside security features like biometric login, transaction validation, and device checks to keep transactions safe without getting in the way of the user experience.
- Kept app quality consistently high across projects 97% crash-free rate, 94% SonarQube score, 90% automation coverage with Katalon, and 80% unit test coverage in Flutter.
- Monitored dev and production environments regularly, tracked down issues before they reached users, and kept up with Play Store and App Store policy updates so release cycles stayed stable and predictable.

Flutter Developer | Yayasan HSI AbdullahRoy (Freelance) | Yogyakarta | 07/2025 – 04/2026

- Worked on a Flutter-based Muslim learning app covering Quran learning, Islamic study events, and donations fixing bugs, resolving UI and logic issues, and analyzing the existing codebase to find performance and logic problems.
- Built a donation feature integrated with a payment gateway to support the foundation's fundraising campaigns and events.
- Worked with backend developers and designers to implement fixes and new features, joining code reviews to keep the codebase clean and maintainable.
- Picked up Flutter best practices and got a feel for how a real development workflow runs by working directly on a live, multi-feature app.

Mobile Developer | Telkom Indonesia (Internship) | Jakarta | 01/2023 – 12/2023

- Worked on mobile apps for agriculture covering field operations, merchant tools, and smart farming across multiple platforms.
- Built features for different user types — field workers managing daily tasks, and merchants handling products, orders, and customers — making sure each segment got what they actually needed.
- Added IoT and real-time monitoring support to help farmers track and automate their farming activities directly from their phone.
- Got hands-on experience with how a real development team operates — picking up tickets, going through code reviews, fixing bugs in dev and production, and seeing how features move from design to shipping.

Junior WordPress Developer | PT. Global Mapping Studio Indonesia (Freelance) | Bogor | 06/2022 – 03/2023

- Built and maintained WordPress sites for corporate clients mostly company profiles, landing pages, and product pages tailored to each client's branding and needs.
- Customized themes and plugins to match project requirements, adjusting layouts and functionality without always building from scratch.
- Added features like contact forms, maps, and basic data-driven elements to make the sites more useful for the client's business.
- Kept sites running smoothly by handling plugin and theme updates, security patches, and performance fixes on a regular basis.

Teaching Assistant – Data Structures & Algorithms and IT Fundamentals | Universitas Pendidikan Indonesia (Part Time) | Bandung | 02/2022 – 05/2022

- Ran practicum sessions for Data Structures & Algorithms, guiding students through topics like linked lists, trees, sorting, and searching making sure they understood the concepts, not just the syntax.
- Also assisted in Introduction to Information Technology practicum, helping students connect the theory they learned in class to actual practice.
- Helped prepare practicum materials together with the lecturer, including exercises and examples that focused on problem-solving and logical thinking.
- Sat with students one-on-one during sessions to help them debug their code, understand where their logic went wrong, and improve their implementations.

Education

Bachelor of Software Engineering | Universitas Pendidikan Indonesia | 2024

GPA: 3.93/4.00 (Cum Laude)

Key Skills

- Cross-Platform Development — Flutter, Dart, React Native, JavaScript/TypeScript, Kotlin
- Multiplatform
- Native Android — Kotlin, Jetpack Compose, Coroutines, ViewModel
- Native iOS — Swift, SwiftUI, UIKit, Combine
- State Management — Bloc, Riverpod, Redux, Context API
- Architecture & Design Patterns — Clean Architecture, MVVM, MVI
- Networking & Local Storage — REST API, Dio, Retrofit, SQLite, Hive, Room
- Testing & CI/CD — Unit Testing, Widget Testing, Fastlane, GitHub Actions
- Performance & Monitoring — Firebase Crashlytics & Firebase Performance
- Security — SSL Pinning, Biometric Auth, ProGuard/R8, Keystore
- DevOps & Release — Google Play Console, App Store Connect, TestFlight, Firebase App Distribution
- Real-time & Integration — WebSocket, Firebase Realtime DB / Firestore, Push Notifications (FCM/APNs), Deep Linking
- Tooling — SonarQube, Katalon, Postman
